

The Fusion Training App solves a number of training problems on the factory floor. Too often, paper instruction is outdated, difficult to locate, and cumbersome to distribute. Paper training records have to be re-inputted into tracking systems, wasting time and leading to errors.

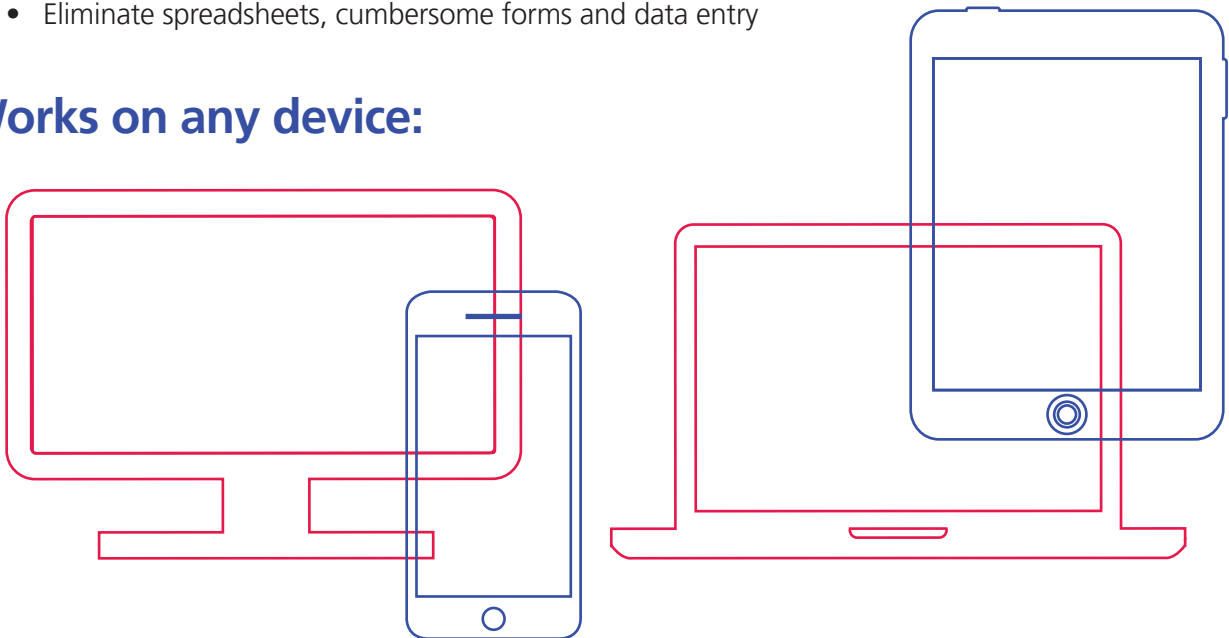

Wouldn't it make sense to have everything in one place, and eliminate paper from the workflow?

The Fusion Training App was developed by and for factory trainers. The App brings together training instruction (written procedures or video) with clear learning criteria, sign-off fields and a customizable skills matrix to track training progress.

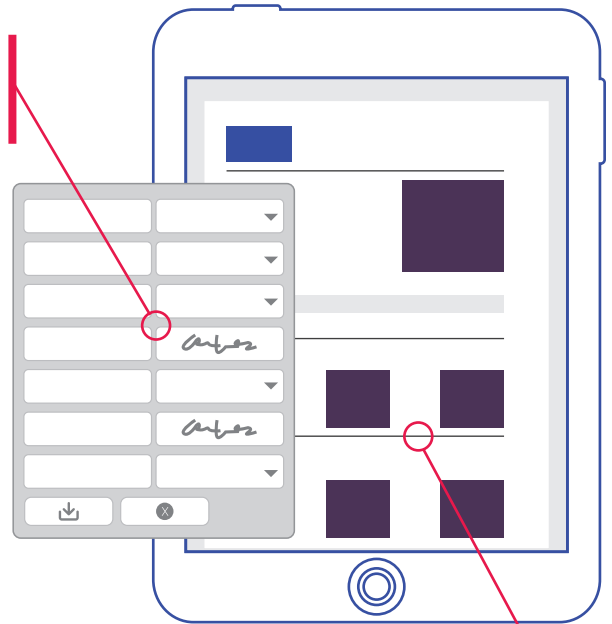

A paperless training workflow:

- Use the skills matrix to track progress in your production team
- Empower trainees to look up their own training progress
- Identify gaps and provide the tools to close them
- Give Auditors the tools to verify training is complete
- Eliminate spreadsheets, cumbersome forms and data entry

Works on any device:

Sign off and certify
trainees directly from the App,
using built-in competency checks

Review instruction directly
during the sign-off process

Identify skills gaps and opportunities.
Use the skills matrix to understand
competency levels

Build and continuously enhance your training

Fusion Training makes it easy to access, implement and track your performance-based training curriculum.

Add courses and modules consisting of documents, videos and competency checks, stored in one easy-to-access spot. Updates are deployed in your App in real-time so your team always has the newest versions.

Utilize Fusion Training to help make your employee performance development a sustainable competitive advantage for your organization.

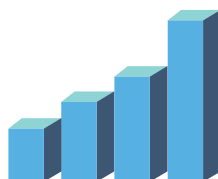

LUMINANCE INC
The Performance Improvement Company

Content Partner
